

dojoburo

Brand and design system

Everything the product is made of: the mark, the palette, the type, the space between things, and the components that use them.

VERSION 1 • DOJOBURO.COM

How to read this

This document describes the product as it is built, not as it might be. Every colour, size, radius and shadow on these pages was read out of the app's own stylesheet, and the components on pages 8 and 9 are rendered live from those same values rather than drawn to look like them.

The one rule that outranks the others

There are no emojis anywhere in Dojoburo. Not in the interface, not in copy, not in notifications, not in commit messages. Where a symbol is genuinely useful, use a geometric or ASCII glyph — the set is on page 11. An emoji renders differently on every platform, carries a tone the product does not have, and cannot be coloured.

What is fixed and what is yours

FIXED

- The mark, its proportions and its clear space.
- Outfit, and the seven type roles on page 6.
- The card: white, 16px, one shadow, no border.
- One primary action per screen.
- The absence of emoji.

YOURS

- Which accent a teammate or company carries.
- Layout, column counts, and how much breathes.
- Illustration and the 3D scene.
- Copy length and tone within the voice on page 11.

Where the truth lives

`src/index.css` is the source of truth for the running app.
`brand/tokens/dojoburo.tokens.json` is the portable copy of the same values, and the Figma plugin in `brand/figma-plugin` reads it to build the library. If those three ever disagree, the stylesheet wins and the other two are stale.

The mark

A dojo seen from the front, with a face. It is drawn as a single continuous stroke so it survives being small, and it is never filled, tilted, or given a background of its own.

LOCKUP • BLACK ON WHITE

LOCKUP • WHITE ON BLACK

STACKED • THE ACCESS GATE

ICON ALONE • UNDER 120PX WIDE

Which one to use

- **Lockup** — the default. Any bar, header, footer, deck or document.
- **Stacked** — when the space is taller than it is wide: a dialog, a splash, a card.
- **Icon alone** — favicons, avatars, app tiles, and anywhere the whole thing would be under 120px wide.
- **Wordmark alone** — only when the icon already appears elsewhere on the same surface.

Clear space, size, misuse

Clear space

Nothing enters the band around the mark. The band is one icon-width on every side — it scales with the mark, so it is right at any size.

Minimum size

- Lockup — 120px wide on screen, 30mm in print. Below that the face closes up.
- Icon alone — 24px on screen, 8mm in print.

Misuse

DO

- Use the supplied files, at their own proportions.
- Black on light, white on dark. Nothing else.
- Place it on a plain, quiet area.
- Scale both parts of the lockup together.

DO NOT

- Recolour it, tint it, or fill the house.
- Add a shadow, an outline, a glow or a gradient.
- Stretch, rotate, skew, or round the corners further.
- Reset the name in another face, or resize it apart from the icon.
- Put it on a photograph, a pattern, or a mid-tone.
- Enclose it in a box that is not one of the supplied files.

Colour

White paper, black text, and colour used only where it carries meaning. Contrast is measured against paper; the figure under each swatch is the real WCAG 2.1 ratio, and it says plainly where a colour must not be used for text.

Base

Paper

#FFFFFF

The page, and the fill of every card.
the ground · everything else is measured against it

Ink

#000000

Body text. Pure black; the app has no grey text in light mode.
21.00:1 on paper · text ok

Mark

#14151A

The logo's own black, a shade warmer than text black.
18.23:1 on paper · text ok

Surface

#F5F6F8

The recessed fill: code blocks, nav items, step tracks.
1.08:1 on paper · never text

Hairline

#E4E4E7

Every 1px rule and input outline. Never used for text.
1.27:1 on paper · never text

Hairline lit

#C7C7CC

The same rule, focused or raised.
1.68:1 on paper · never text

Accents

These identify — a teammate, a skill, a company. They tint a glyph, a number, a chip or a ring of shadow. None of them is a text colour on white.

Blue

#4F9DF7

Links, the Action skill, the default lift.
2.80:1 on paper · never text

Violet

#A78BFA

Selection, the Analysis skill, the default card accent.
2.72:1 on paper · never text

Mint

#3FD0B0

Positive figures and progress.
1.93:1 on paper · never text

Pink

#FF7EB6

A teammate tint.
2.36:1 on paper · never text

Gold

#FFC24B

A teammate tint.
1.61:1 on paper · never text

Peach

#FF9A76

A teammate tint.
2.07:1 on paper · never text

Green

#45C46A

A teammate tint.
2.24:1 on paper · never text

Red

#FF5D6C

A teammate tint, and the error state.
2.99:1 on paper · never text

Status, the CTA, and dark

Status

OK

#37C46A

A run finished.

2.27:1 on paper · never text

Warning

#FFAB3D

A key is missing, a quota is close.

1.88:1 on paper · never text

Error

#FF5D6C

A run failed.

2.99:1 on paper · never text

Danger

#E0475F

The outline and label of a destructive button.

4.01:1 on paper · large text only

The one gradient

Every primary call to action in the app carries the same blue-to-green gradient, animated slowly across a 220% wide box. It is the only gradient in the interface, and it exists so that the single most important control on a screen is unmistakable. Text on it is always #04232B — at 9.42:1 against the lightest stop, it is the only value that stays readable across the whole sweep.

Create your company

Dark

Dark mode changes six values and nothing else. Cards become panels, the shadow deepens, and secondary text finally becomes grey — it is the one place the app has a muted colour.

Paper

#000000

The page.

the ground · everything else is measured against it

Ink

#F2F3F7

Body text.

18.94:1 on the dark ground · text ok

Muted

#9AA0AD

Secondary text — grey only here.

8.01:1 on the dark ground · text ok

Panel

#131317

What a card becomes.

1.13:1 on the dark ground · never text

Surface

#1C1C22

The recessed fill.

1.24:1 on the dark ground · never text

Type

One family, Outfit, at four weights. Titles are ExtraBold and tightly tracked; everything else is Regular at a generous line height. There is no second family — the monospace stack appears only inside code and hashes.

The roles

ROLE	SIZE	WEIGHT	LINE	TRACK	WHERE
Wordmark	27px	900	1	-0.02em	the app name set as type · the access gate and the top bar
Title	19px	800	1.2	-0.015em	one size for every card title and section heading, on every screen
Subtitle	17px	800	1.35	-0.005em	
Body	16px	400	1.6	0	the document default
Lead	13px	400	1.55	0	the explanatory line under a title, and all secondary copy inside a card
Label	12.5px	800	1.4	0.01em	the caption above a field
Action	13px	800	1.2	0	the link-like call to action at the foot of a card
Code	11.5px	400	1.5	0	

Specimens

WORDMARK · 27PX · 900

dojoburo

TITLE · 19PX · 800

Place & tune your teammates

BODY · 16PX · 400

A company is a set of teammates that share a brief, a set of connected apps and a bill.

LEAD · 13PX · 400

Four teammates · running since March. Opens on the seating plan.

LABEL · 12.5PX · 800

COMPANY NAME

Rules

- A card title is 19px on every screen in the app. Not 15 here and 20 there.
- Secondary copy inside a card is 13px. Body copy outside a card is 16px.
- Never set a heading in Regular, and never set body copy in ExtraBold.
- Sentence case everywhere except the field label, which is the only uppercase in the product.

Space, radius, elevation

Spacing

A 4px base. Inside a card: 20px padding, 6px between a title and its line. Between cards: 16px. Between sections: 26px or more. A surface breathes at its edges with `clamp(16px, 4vw, 40px)`.

Radius

Elevation

Three levels, no more. A card sits on one shadow; hovering deepens that same shadow and lifts the card 3px; a dialog uses a longer, softer version of it. Nothing in the app carries both a shadow and a border.

Selection

A selected card stays white. The state is carried by a 1.5px ring of accent-coloured shadow and a deeper lift — never by tinting the paper. Tinting was tried and it made a grid of companies read as a set of unrelated colours instead of one set of cards.

Cards, buttons, fields

Nothing here was drawn to look like the product. Every specimen on this page and the next two is built from the values on the previous pages, at its real size, then flattened at 3× for print — a blurred shadow left live turns into an opaque slab in some PDF viewers, and these pages are partly about the shadow.

Card

Buttons

One primary per screen. The gradient belongs to it alone; a second one on the same surface means neither is the answer. A destructive button is outlined, never filled — it should not be the brightest thing you can see.

Field

Focus darkens the hairline to ink. It never adds a coloured ring — a blue halo under a control was removed from every screen in the app and must not come back.

Chips, toasts, navigation

Chip

A label, never a button. The tint carries the meaning, so a chip is the one place an accent may sit behind text — and the only place a warning tint takes ink rather than white.

**Analysis****Action****Ready****Needs a key**

Toast

**OK****Run finished**

Acme Robotics · 2 min

✕

Always closable, and clear of the menu. A message you cannot dismiss is a message you learn to ignore.

Navigation

**Billing****Connect apps****Dojo settings****Account**

Where you are is a quiet fill and a 2px violet rule on the leading edge. A nav item is never a filled black pill.

Dialogs

The widest single shape in the system: 400px, 20px corners, the deepest shadow, everything centred. The access gate is the reference build — a whole screen reduced to one card.

Rules

- Reserve a line of height for the error message, so a wrong answer never makes the card jump.
- The mark goes above the name, the name above the title. Nothing else sits at the top.
- One action. If a dialog needs two equal buttons it is not a dialog, it is a screen.
- Nothing behind a dialog scrolls while it is up.
- It arrives in 340ms, rising 10px — and not at all under `prefers-reduced-motion`.

The teammates

The one place the product shows a face. A teammate card is an ordinary card — white, 16px, one shadow — carrying a real 3D character, its codename, its job title and one line about what it does. These are captures of the running app, because a WebGL canvas cannot be printed.

Anatomy

- **The portrait** — a 3D character, framed from its own bounding box so no teammate is ever clipped and every one fills its frame.
- **The codename** in Title, 19px. It is the identity; people say Chief, not "the CEO agent".
- **The job title** in Lead, directly under it.
- **One line** saying what it does. Never two.
- **The accent** is the teammate's own tint, and it colours the ring when selected — never the paper.

A roster

Rules

- Each teammate keeps its character. The face is how you recognise it across the landing, the roster and the walkthrough — swapping one is renaming a colleague.
- The portrait idles: a soft look left and right, a small lean, a slow bob. It never spins on a turntable.
- Every animation stops under `prefers-reduced-motion`, and the canvas pauses entirely whenever a surface covers it — a scene nobody can see costs the same to draw as one they can.
- Never put a control inside the portrait. The canvas takes the click and the card stops working.

3D objects

Six solid objects stand in for the ideas the landing has to explain. They are modelled, lit and shaded rather than drawn — the same glossy material, the same key light from the upper left, one accent colour each, on nothing.

How they are used

- One object per section, never two in view at once. They punctuate; they do not decorate.
- The colour comes from the section, not from the object. The same gear is teal here and violet elsewhere.
- They spin slowly and bob. They never carry a shadow on the page — they float over their own soft halo.
- They are decoration and are marked as such: `pointer-transparent`, `aria-hidden`, and gone below the tablet breakpoint.
- They never replace a glyph. A control is labelled with a word or one of the glyphs on the next page — never with a small 3D object.

Why objects and not illustrations

A flat illustration set has to be commissioned, and then extended by the same hand every time the product grows a section. These are geometry: a new one is a few primitives and the same material, so the set can grow without a style drifting away from itself. It is also the same renderer that draws the teammates, so the two read as one world rather than as artwork sitting next to software.

Glyphs, motion, words

Glyphs, instead of emoji

The whole permitted set. Each is a real typographic character, so it inherits the text colour, the weight and the size around it.

Motion

- **140ms** — a border or a colour changing.
- **160ms** — a hover lift, 2 to 4px.
- **220ms** — a shadow deepening.
- **280ms** — a panel sliding in or out.
- **500ms** — a whole surface arriving, rising 12px as it fades in.

Easing is `cubic-bezier(.22, .61, .36, 1)` for arrivals and `cubic-bezier(.2, .9, .3, 1)` for lifts. Every animation is disabled under `prefers-reduced-motion`, including the CTA gradient — that is not optional.

Words

WE WRITE

- Plainly, in sentence case, in the second person.
- What happened, then what to do about it.
- "Four teammates · running since March".
- Company, teammate, run, brief, dojo.

WE DO NOT WRITE

- Exclamation marks, or an emoji standing in for a tone.
- "Oops!", "Something went wrong", "Please try again later".
- Agent, bot, AI-powered, revolutionary, seamless.
- Project — it is a company.

What is in the pack

Everything below is in `brand/` in the repository, and every file is generated from the app's own sources by a script that ships beside it — so the pack can be rebuilt, not just edited.

FILE	WHAT IT IS
<code>logo/dojoburo-icon-{black,white}.svg</code>	The mark alone, and the same as PNG at 1×, 2× and 3×.
<code>logo/dojoburo-wordmark-{black,white}.svg</code>	The name alone, outlined — no font needed to open it.
<code>logo/dojoburo-lockup-{black,white}.svg</code>	Icon and name side by side.
<code>logo/dojoburo-stacked-{black,white}.svg</code>	Icon above name.
<code>logo/*.png, *@2x.png, *@3x.png</code>	The same eight, rasterised.
<code>tokens/dojoburo.tokens.json</code>	Colour, type, space, radius, shadow and motion as W3C design tokens. Imports into Tokens Studio.
<code>figma-plugin/</code>	A Figma plugin that builds the library — styles and components — inside a Figma file.
<code>render/</code>	The capture sheet, and the 3D stills of the teammates and objects it produces.
<code>build-logos.py</code>	Regenerates every SVG from <code>public/logo-icon-dojoburo.svg</code> and Outfit.
<code>rasterise.mjs</code>	Regenerates every PNG.
<code>render-3d.mjs</code>	Recaptures the 3D stills from the running app.
<code>make-guidelines.mjs</code>	Regenerates this document.

Every export carries a 10px margin

The margin is part of the artwork, measured in each file's own pixel space, so a logo dropped straight into a layout is never flush against something else. In the PNGs it scales with the export: 10px at 1×, 20px at 2×, 30px at 3×.

About Figma

Figma's `.fig` container is proprietary and undocumented — nothing outside Figma can write one, so this pack does not pretend to. What it gives you instead is the plugin: run it once in a Figma file and it creates all thirty-one colour styles, eight text styles, four elevation styles and fourteen components in place, as native Figma objects. Save that file and you have the `.fig`, published as a library if you want it. The step-by-step is in `brand/README.md`.
